

# For a Better Tomorrow

A Workplace Solution for COVID-19

# The Next Starts Now

TCG Digital’s Back2Office solution suite comprises three modules; WorkSafe—a smart workflow solution ensuring employee safety, WatchSafe—a computer vision-based AI solution that leverages the latest in image and video analytics to drive adherence to regulations, and CyberTrack; a cybersecurity and productivity solution enabling a secure and productive working model.

As the government restrictions gradually phase out, most business leaders face complex issues and especially those revolving around the well-being of employees. They contemplate bringing back the right people at the right time to achieve long-term sustainability and are looking

at organizational models that facilitate face-to-face work and interactions. While a percentage of the workforce would resume on-site work, there are assumptions that remote and virtual work would continue. As the next normal sets in, the three modules of our solution cover three critical areas.

## Employee safety

Employees will return to work with the belief that their risk of infection is minimal. Here companies can ensure social distancing, wearing of masks and disease prevention by detecting infected people, thereby reducing the spread of the disease. The use of technology will be critical in managing employees' health. **WorkSafe** and **WatchSafe** will prove indispensable in this environment, and the fast adoption of these two modules will help organizations in risk management, hyper-vigilance, workforce scheduling, and workplace optimization.

## Compliance to statutory regulations

Equally important is being able to navigate the changing regulatory requirements. Organizations need to review their current facility setup and ensure that it meets the regulatory requirements prescribed through various notifications. It is critical for them to understand the implication of changed regulations on business and put necessary measures in place to comply with them. For a safe working environment, employers need to continue to ensure that the employees comply with site rules

which help prevent the spread of the disease when they return to work. Our workflow solution, **WorkSafe** ensures adherence to company policies and local rules and regulations.

## Cyber resilience

As enterprises move towards a blended model when a percentage of the workforce continues from home and the rest from office premises, cyber threats loom large. Here **CyberTrack** which promotes cyber resilience becomes critical to the safety of digital information and data assets. This module enables a safe and productive remote work environment through real-time tracking of entity behavior and anomaly detection.

Our team is here to help you prepare for a successful return to the physical office. We will facilitate the shift to “the next normal” and pave the way for you to resume operations.
